**Allowable subject matter**

Claims 1-16 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art neither discloses nor suggests the following limitations, in combination with the remaining elements disclosed in claims 1, 7 and 12:

- each successive cavity resonates at a progressively-lower RF resonance frequency to maintain approximate resonance of the pulses of charged particles, with the respective RF resonance frequency of each the successive cavity decreasing substantially equal increments corresponding to a difference frequency, and the pulses of the charged particles being emitted in correspondence with the difference frequency such as required by claims 1, 7, and 12.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

**Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Symons (6,617,810), another applicant's patent discloses a related invention but is not able to construct neither obviousness-type nor non-obviousness-type double patenting rejections against the claimed invention.

Art Unit: 2821

Smith et al. (6,107,628) discloses an apparatus for directing ions into a region under vacuum comprising a series of elements within a region maintained at a pressure, and each having successively larger apertures forming an ion funnel.

Billen (5,578,909) discloses a coupled cavity drift tube linac comprising a plurality of cavities, an electron source, magnetic coils and resonant mode.

Friedman (4,215,291) discloses a collective particle accelerator comprising a plurality of cavities, ions or electron source, magnetic coils. However, they all fail to disclose that each successive cavity resonates at a progressively-lower RF resonance frequency to maintain approximate resonance of the pulses of charge particles, and RF resonance frequency being decreased in substantially equal increments according to a difference frequency.
